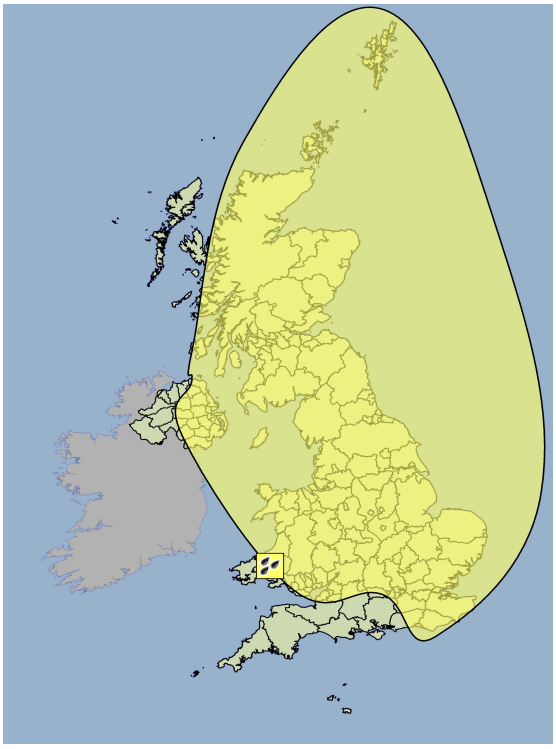
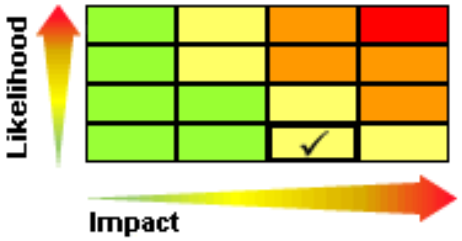
National Severe Weather Warning Service





Chief Forecasters Assessment
A depression, containing some of the warm, moist air derived from the remnants of Hurricane Bertha, continues to move northeastwards across the UK and will become an unseasonably intense feature across the North Sea this evening and overnight.

There is the potential for rainfall totals of more than 50 mm in places and coastal gusts of 50-60 mph, along with large waves.

The rainfall will become increasingly focused across northern England and Scotland overnight.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:15 on Sun, 10th Aug 2014** until **23:45 on Sun, 10th Aug 2014**

There is the potential for severe weather over much of the UK during Sunday as a complex depression tracks over the UK. The public should be aware of the risk of flooding due to heavy rain, with thunderstorms affecting some places. Strong winds and large waves are also likely, particularly on the coasts of southern England and areas bordering the northern Irish Sea. Given the unseasonable nature of the weather this could be sufficient to disrupt transport and make outdoor activities dangerous.

This is an update to the warning to remove parts of southwestern Britain where the risk of disruptive rainfall is now reducing. Further updates are likely through today as the rain continues to clear northeastwards, whilst strong winds become the main focus across some areas.
